PROFILE

Software Developer who builds full-stack web applications with JavaScript and TypeScript, using React, Node.js, Express and MongoDB, from a search engine built from scratch to a team-built social media platform. I design clean REST APIs, model data with MongoDB and Mongoose, and build responsive React interfaces with careful error handling. I am looking to join a product team as a full-stack or web developer, in Lagos or remote, where I can ship reliable features and keep growing.

KEY SKILLS

Technical

- JavaScript & TypeScript
- React & Redux Toolkit
- Next.js
- Node.js & Express
- MongoDB & Mongoose
- REST APIs, Git, GitHub, Postman

Professional

- Problem-solving
- Collaboration
- Clear communication
- Adaptability
- Self-directed learning
- Technical leadership

PROJECT EXPERIENCE

Social Media Application 2026 - PRESENT
Architecture & Engineering Lead | GOMYCODE Team Project

- Designed the system architecture and data models for a social platform built with React, TypeScript, Redux, Express and MongoDB.
- Collaborating on design and development through Git and GitHub.

Search Engine API 2026
Backend Developer | Personal Project

- Built a working search engine from scratch that crawls web pages, indexes every word in an inverted index and ranks results with BM25.
- Made search available to other applications through a keyed REST API.

Email Verification App 2026
Full-Stack Developer | Personal Project

- Delivered a full-stack email verification tool with a React + Vite interface backed by an Express API.

MERN Users App 2026
Full-Stack Developer | GOMYCODE Project

- Shipped a full CRUD application (React, Express, MongoDB) that returns clear errors for invalid input, duplicate emails and database outages.
- Prepared it for cloud deployment with environment-based configuration and a health-check endpoint.
